Installation

Review the system requirements listed below before installing Anaconda Distribution. If you don't want the hundreds of packages included with Anaconda, install Miniconda, a mini version of Anaconda that includes just conda, its dependencies, and Python.

System requirements

On Windows, macOS, and Linux, it is best to install Anaconda for the local user, which does not require administrator permissions and is the most robust type of installation. However, with administrator permissions, you can install Anaconda system wide.

Installing on Windows
Installing on macOS
Installing on Linux
Installing in silent mode
Installing for multiple users
Verifying your installation
Updating conda and Anaconda
Installing previous versions of Anaconda Distribution
Using Anaconda on older operating systems
Uninstalling Anaconda Distribution

Silent mode install

Use silent mode to automatically accept default settings and have no screen prompts appear during installation.

Need to use Anaconda on an older operating system?

See Using Anaconda on older operating systems.
